

## What Happened During Vacation

You had more important things to think about while on summer vacation than how your solar system was performing back home. SolarVu however was continuously checking your solar PV systems and recording any detected faults so you could deal with them on returning to work. For a large portfolio, the new site Log Faults added to the SMART Enterprise account, will show you which sites have issues to investigate. Click on the Log Fault count to see the detailed site error log while you were away.

In SMART Enterprise portfolio view, select O&M Profile and Period. Log Faults column sorted from highest at the top shows which sites need attention. Click on the Log Faults number to access the site fault log for details.

Status	Name	Log Faults	Size kWac	Sell Power Now	Output Now % Capacity	Run Time	Performance Ratio DC	Energy Ratio Yesterday
Total		162	4,887 kW	749 kW				
1		85	180 kW	0 kW	0 %	258 Days	--	--
2		17		0 kW	0 %	6.0 Years	--	--
3		17		0.73 kW	3 %	5.6 Years	--	0 %
4		9		0.50 kW	5 %	3.2 Years	--	100 %
5		6		2.25 kW	23 %	6.2 Years	--	89 %
6		6	35.0 kW	6.62 kW	19 %	2.3 Years	83 %	97 %
7		5	10.0 kW	2.15 kW	22 %	6.2 Years	--	98 %
8		4	9.0 kW	2.04 kW	23 %	7.1 Years	--	--
9		3	10.0 kW	0 kW	0 %	6.8 Years	--	--

**Mutchmor PS - Ottawa, ON** ( mutchmorps.solarvu.net )

**SolarVu Fault Log**  
 - Click on device name for 30 days device log  
 - Click on time for fault status at that time
